

## 2 Holiday Cottages Connected to One Unit

2008

**Age of Property / Location:** New, barn conversion.

**New Heating System:** Radiators + 300l unvented hot water Cylinder.

**Existing Insulation:** Double glazing, current building regulation.

**Upgrading required:** none.

**Back Up:** Wood burner, immersion heater (hot water).

**Air Source Unit:** 12kw unit producing 100% of heating and hot water for the 2 cottages.

**Customer comment after 3 year use:**

*“For our two holiday cottages and being in the countryside, we didn’t want to depend on oil. Our prime reason to choose a heat pump over a conventional oil boiler was its lower running cost. Our holiday makers are always welcoming the fact we provide them with a green heating alternative. This gives us a strong selling point when we advertise the cottages.”*
